

npm i chalk

```
import chalk from 'chalk'; // importing chalk module
```

```
console.log(chalk.blue('Hello world!'));
```

```
console.log(chalk.yellow('Hello Pakistan'));
```

```
console.log(chalk.green('hello World'));
```

Chalk properties

Modifiers

- **reset** - Reset the current style.
- **bold** - Make the text bold.
- **dim** - Make the text have lower opacity.
- **italic** - Make the text italic. *(Not widely supported)*
- **underline** - Put a horizontal line below the text. *(Not widely supported)*
- **overline** - Put a horizontal line above the text. *(Not widely supported)*
- **inverse** - Invert background and foreground colors.
- **hidden** - Print the text but make it invisible.
- **strikethrough** - Puts a horizontal line through the center of the text. *(Not widely supported)*
- **visible** - Print the text only when Chalk has a color level above zero. Can be useful for things that are purely cosmetic.
